

OBJECTIVE

Toews Managed Risk ETF, MRSK, is an options hedged US equity strategy that seeks to provide long-term growth of capital while limiting risk.¹

HOW TO USE MRSK IN A PORTFOLIO

- Use as a risk-managed diversifying sleeve within a portfolio's allocation to complement traditional asset classes
- Draw an allocation from equities to potentially decrease risk
- Draw an allocation from fixed income to potentially increase returns

INVESTMENT MANAGERS

Phillip Toews, CEO & Portfolio Manager
Jason Graffius, COO & Portfolio Manager
Randy Schroeder, Portfolio Manager
Charles Collins, Portfolio Manager, Options and Derivatives Specialist
Landon Gould, Vice President, Investment

STRATEGY

Toews Managed Risk ETF, MRSK, may serve as a valuable diversification tool with the potential to enhance a portfolio's overall risk and return profile. The ETF allows investors to participate in market rallies, yet plan for potential contingencies and manage downside risk.

The strategy employs various approaches to generate prospective returns, each tailored to different market cycles:

UPWARD-TRENDING MARKETS

Potential Equity appreciation

DOWNWARD-TRENDING MARKETS

Potential Put Option appreciation

POTENTIAL INCOME

From Option Writing

INCEPTION 6/24/2020 TO 4Q 12/31/2023

US Fund Options Trading Category	6.9%	17.1%	17.1%	5.5%	7.4%

Source: Morningstar Direct. The performance data quoted here represents past performance. Current performance may be lower or higher than the performance data quoted above. Investment return and principal value will fluctuate, so that shares, when redeemed, may be worth more or less than their original cost. Past performance is no guarantee of future results. Please review the Fund's prospectus for more detail on the expense waiver. Without these waivers, the Fund's total annual operating expenses would be 1.34%. The Fund's investment adviser has contractually agreed to reduce fees and/or absorb expenses of the Fund, at least until August 31, 2024, to ensure the net annual Fund operating expenses will not exceed 0.95%, subject to possible recoupment from the Fund in future years. Results shown reflect the waiver, without which the results could have been lower. A fund's performance, especially for very short periods of time, should not be the sole factor in making your investment decisions. View performance information current to the most recent month-end at www.toewsetsf.com.

KEY FACTS	CUSIP	Inception Date	Expense Ratio	Net Assets	Distribution Schedule	NAV
	66538J720	June 24, 2020	Net: 0.95%, Gross: 1.34%	\$122,221,629	Annual	\$28.93

TERMS AND DEFINITIONS:

Alpha: the return on investment that is more/less than the benchmark index

Annualized Return: the geometric mean of the returns with respect to one year.

Beta: measure of systematic risk, or sensitivity of a manager to movements in the benchmark.

Cumulative Return: investment total return earned over the entire investment time period.

Down Capture: measure of an investment manager's overall performance in down-markets.

Maximum Drawdown: measures the largest percentage decline from a peak to a trough.

CBOE S&P 500 Buywrite BXM PR USD: index designed to track the performance of a hypothetical buy-write strategy on the S&P 500 Index.

US Fund Options Trading Category: Options trading strategies use a variety of options trades, including put writing, options spreads, options-based hedged equity, and collar strategies, among others.

Sharpe Ratio: measures risk-adjusted returns using Standard Deviation. Higher Sharpe Ratio denotes better returns relative to risk.

Up Capture: measure of an investment manager's overall performance in up-markets.

Loss Deviation: measures the deviation of negative returns.

Average Drawdown: measures the average decline from the peak to the trough in the value of an investment over a specified period.

IMPORTANT RISK INFORMATION

Market Price returns are based upon the midpoint of the bid/ask spread at 4:00 p.m. ET when NAV is normally determined for most Toews Funds, and do not represent the returns you would receive if you traded shares at other times.

The statistics presented are defined as follows. Annualized Return is the geometric mean of the returns with respect to one year. Cumulative Return is the return on the investment in total.

Investors cannot directly invest in an index and unmanaged index returns do not reflect any fees, expenses or sales charges.

Options trading strategies use a variety of options trades, including put writing, options spreads, options-based hedged equity, and collar strategies, among others. In addition, strategies in this group that engage in option writing may seek to generate a portion of their returns, either indirectly or directly, from the volatility risk premium associated with options trading strategies. Funds in the category will typically have beta values to relevant benchmarks of less than 0.6. Beta is a measure of market risk. It indicates how sensitive an investment's returns have been to movements in the market over a specific time period. Put another way, it indicates how the investment's value has reacted to either a movement up or a movement down in the market.

The Fund's use of futures contracts in-volves risks

different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include leverage risk and correlation or tracking risk. Because futures require only a small initial investment in the form of a deposit or margin, they involve a high degree of leverage. The fund may have options risk. Options are subject to changes in the underlying securities or index of securities on which such instruments are based. The fund may invest in ETFs. ETFs are subject to investment advisory fees and other expenses, which will be indirectly paid by the Fund. As a result, your cost of investing in the Fund will be higher than the cost of investing directly in ETFs and may be higher than other mutual funds that invest directly in securities. There is equity risk, as the price of equity securities may rise or fall be-cause of changes in the broad market or changes in a company's financial condition, sometimes rapidly or unpredictably.

ETF's involve risk including possible loss of principal. An investor should consider the ETF's investment objectives, risks, charges, and expenses carefully before investing. This and other information about the ETF is contained in the prospectus, which can be obtained by calling 877-558-6397. Please read the prospectus carefully before investing. The Toews Funds Agility Shares Managed Risk Equity ETF is distributed by Northern Lights Distributors LLC, member FINRA/ SIPC.
